The house map

MAP 01 / ROOM SCALE

A practice floor plan for pendulum work. For your own home, use the drawing sheet on page two. Turn the paper to match the way you face as you enter.

☐ Entry

Read the map

Rest your elbow. Hold your pendulum over the margin and ask to see your yes movement, then your no. Notice each motion. If they look alike, pause and try again later.

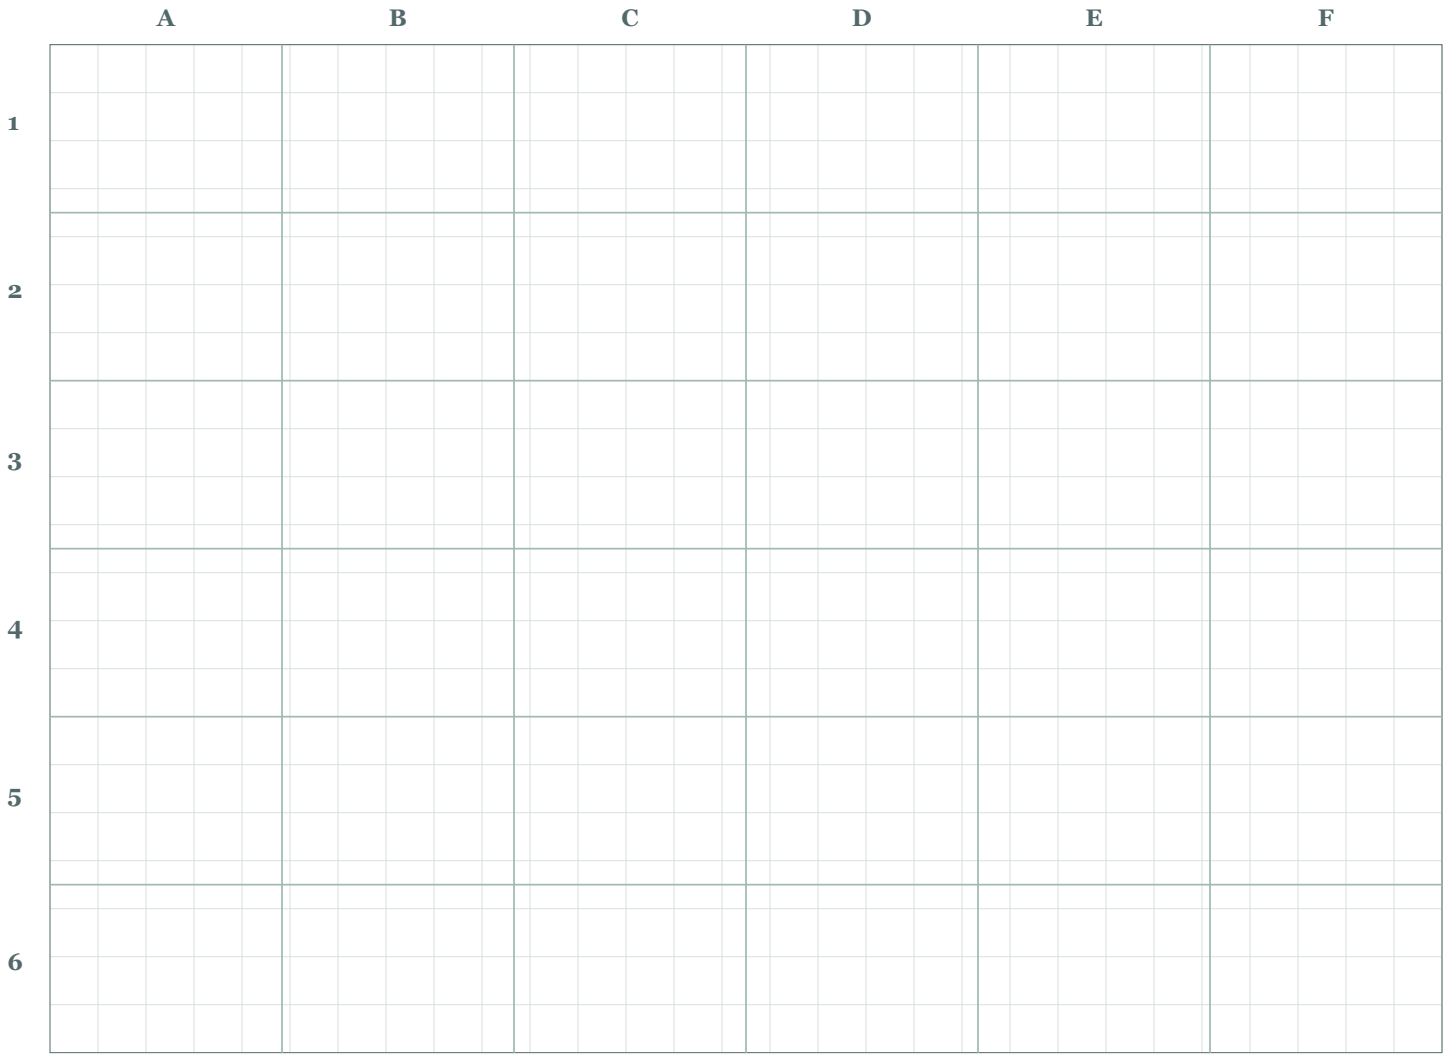

Picture the missing item. Hold the tip over one room at a time and ask, "Is this the room to search?" Let the pendulum settle between rooms. Mark a clear yes in pencil, then search the actual room.

Map your own space

MAP 02 / DRAW TO MATCH YOUR SPACE

Sketch your walls and doorways on the grid. Mark where you enter. For a closer reading, print a second copy and draw just one room, including its shelves, seats and corners. The shape matters more than the scale.

What I'm looking for _____

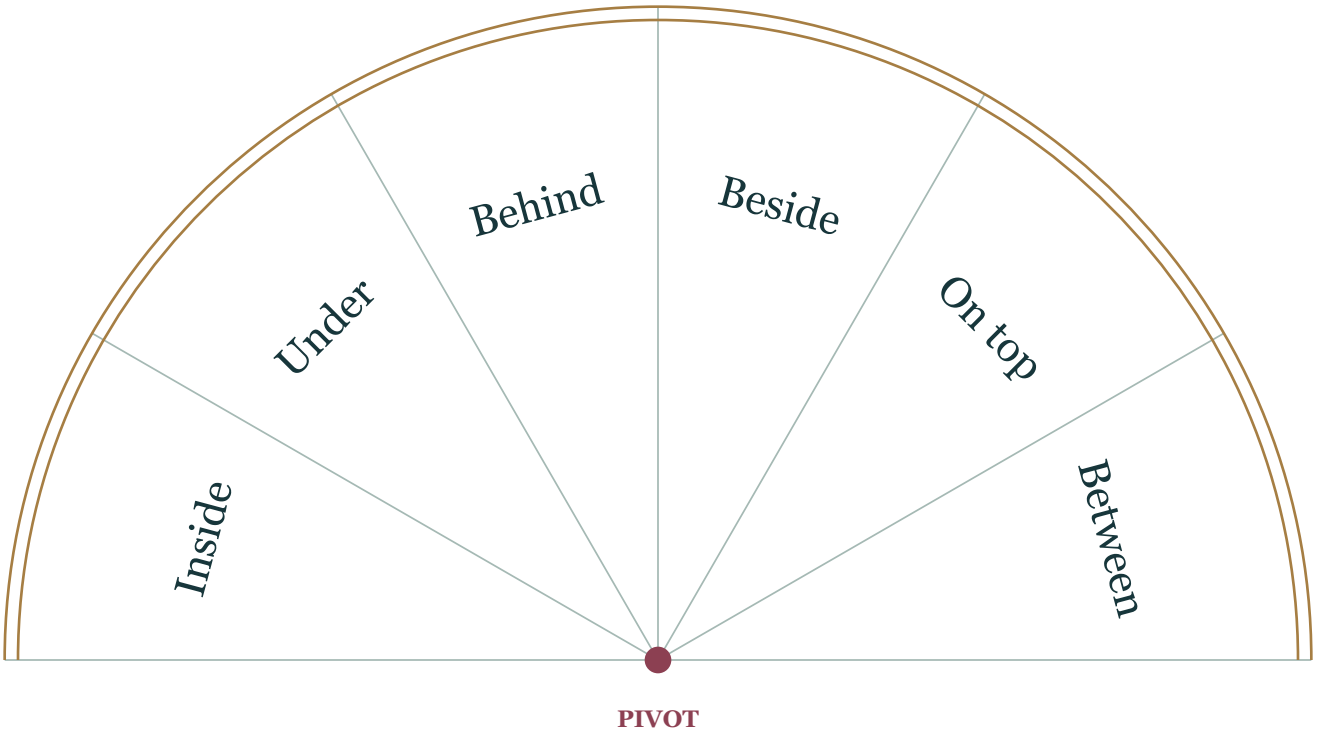

Where the pendulum responded _____ *Where I found it* _____

Use the edge references to record a spot, such as B3.

Where in the room?

CHART 03 / WITHIN A ROOM

With a room in mind, hold the tip above the pivot and ask, "Where shall I look more closely?" Read the outward half of the swing toward the printed arc. A swing along a dividing line can wait for a clearer reading.

Follow the reading

Pair the answer with a feature on your map. "Behind" in the entry hall might lead you behind a hanging coat. Set down the pendulum and look there. If nothing turns up, return to your map and try the next spot.
